

How Can You Keep the Texas Air Clean?

- Add air-purifying plants around your home.
- Choose natural cleaning products to reduce chemical fumes.
- Turn off the lights when you leave a room. This saves energy, reduces air pollution, and helps the planet!
- Unplug your electronics when not in use. Unplugging saves power and keeps the air clean.
- Bike or walk to school if you live nearby.
- If you're running errands with your family, take public transportation.
- Are you going somewhere with friends? Carpool or share rides with others to lower the number of cars on the road. Less car pollution keeps our beautiful Texas skies clear!
- Make sure your car runs well by checking the oil, keeping the tires properly inflated, and fixing anything broken. By keeping a car healthy, we help keep the air cleaner for everyone.
- Hold back from burning leaves or trash unnecessarily. Instead, try composting those leaves. Trash like paper, plastic, and cans can be recycled into new things! These alternatives keep the air cleaner and healthier for everyone to breathe.
- Organize a tree planting event. Trees are nature's air-cleaners!
- Spend time outdoors. Playing outside means less electricity is used indoors.
- Energy-efficient appliances, like dryers and dishwashers, reduce pollution by using less energy.
- Shop at a farmers' market. You'll support local produce which minimizes transportation emissions.
- Switch to non-aerosol alternatives in personal care and household products.
- Encourage the community to participate in car-free days.
